

This lab session covers Django Contrib Package (admin, sessions and messages). By the end of this session, students should have a very good understanding of how to use these packages.

Pre-lab Preparation:

1. Pages of the previous lab.
2. Add the necessary contrib packages in settings.py

Lab Activities:

Task 1: Create a register page with a URL '/users/register' with any necessary HTML files and view functions.

```
class RegisterForm(forms.ModelForm):  
  
    class Meta:  
        model = User  
        fields = '__all__'  
  
    password = forms.CharField(widget=forms.PasswordInput)
```

```
def register(request):  
    if request.method == 'POST':  
        form = RegisterForm(request.POST)  
  
        if form.is_valid():  
            user = form.save(commit=False)  
  
            user.set_password(form.cleaned_data['password'])  
  
            user.save()  
  
            login(request, user)  
  
            return redirect('/books/')  
    else:  
        form = RegisterForm()  
  
    return render(request, 'bookmodule/register.html', {'form': form})  
  
path('lab12/task1/users/register/', views.register, name='register'),  
]
```

```
apps > templates > bookmodule > <> register.html > ...
1  {% extends "layouts/base.html" %}
2
3  {% block content %}
4
5  <h1>Register</h1>
6
7  <form method="POST">
8
9      {% csrf_token %}
10
11      {{ form.as_p }}
12
13      <button type="submit">
14          Register
15      </button>
16
17  </form>
18
19  {% endblock %}
```

Register

Username: Required. 150 characters or fewer. Letters, digits and @/./+/-/_ only.

Email address:

Password:

- Your password can't be too similar to your other personal information.
- Your password must contain at least 8 characters.
- Your password can't be a commonly used password.
- Your password can't be entirely numeric.

Password confirmation: Enter the same password as before, for verification.

Password:

Footer Section

Task 2: Create a login page with a URL '/users/login/' with any necessary HTML files and view functions.

```
class LoginForm(AuthenticationForm):  
    pass
```

```
def login_user(request):  
    if request.method == 'POST':  
        form = LoginForm(request, data=request.POST)  
        if form.is_valid():  
            user = form.get_user()  
            login(request, user)  
            return redirect('/books/')  
    else:  
        form = LoginForm()  
    return render(request, 'bookmodule/login.html', {'form': form})
```

```
path('lab12/task2/users/login/', views.login_user, name='login'),  
]
```

```
1 {% extends "layouts/base.html" %}  
2  
3 {% block content %}  
4  
5 <h1>Login</h1>  
6  
7 <form method="POST">  
8  
9     {% csrf_token %}  
10  
11     {{ form.as_p }}  
12  
13     <button type="submit">  
14         Login  
15     </button>  
16  
17 </form>  
18  
19 {% endblock %}
```

Task 3: Apply login permission to the previous lab. If the user is not logged in, redirect the user to the login page.

```
from django.contrib.auth.decorators import login_required
```

```
@login_required
def lab11_delete_student(request, id):

    student = Student.objects.get(id=id)

    student.delete()

    return redirect('/books/lab11/students/')

@login_required
def lab11_task2_students(request):

    students = Student2.objects.all()

    return render(
        request,
        'bookmodule/lab11_task2_students.html',
        {'students': students}
    )

@login_required
def lab11_task2_addstudent(request):

    if request.method == 'POST':

        form = Student2Form(request.POST)
```

Task 4: Add a link '/users/logout' to sign out users to all pages where the user is logged in.

```
def logout_user(request):  
    logout(request)  
    return redirect('/books/lab12/task2/users/login/')
```

```
path('lab12/task4/users/logout/', views.logout_user, name='logout'),  
]
```

```
<link rel="stylesheet" href="{% sta  
<a href="{% url 'logout' %}">  
    Logout  
</a>  
{% block stylesheets %}{% endblock
```

Task 5: Provide messages to users, like, 'you have successfully registered', 'login successfully', or 'error message.'

```
from django.contrib import messages

user.save()
messages.success(request, "Registered successfully")

login(request, user)
messages.success(request, "Login successful")

logout(request)
messages.success(request, "Logout successful")
return redirect('/books/lab12/task2/users/login/')
```
